University projects

Bachelor project

This Bachelor project was designed by carrying out a critical and detailed analysis from the cultural, social, economic and environmental point of view, on the city of Giurgiu located in the south of Romania. It had as its subject the development of an urbanistic proposal in an undeveloped area located in the city. The proposed arrangement consists in the development of a park in an area of a disused factory. The natural defining elements of the area were the natural lake and the natural banks that defined the area. Capitalizing on the natural elements, I proposed an area of green spaces with recreational spaces and crossing spaces such as pedestrian walkways and pergolas offer accessibility throughout the whole area.

Learning projects

Landscaping under social distancing conditions

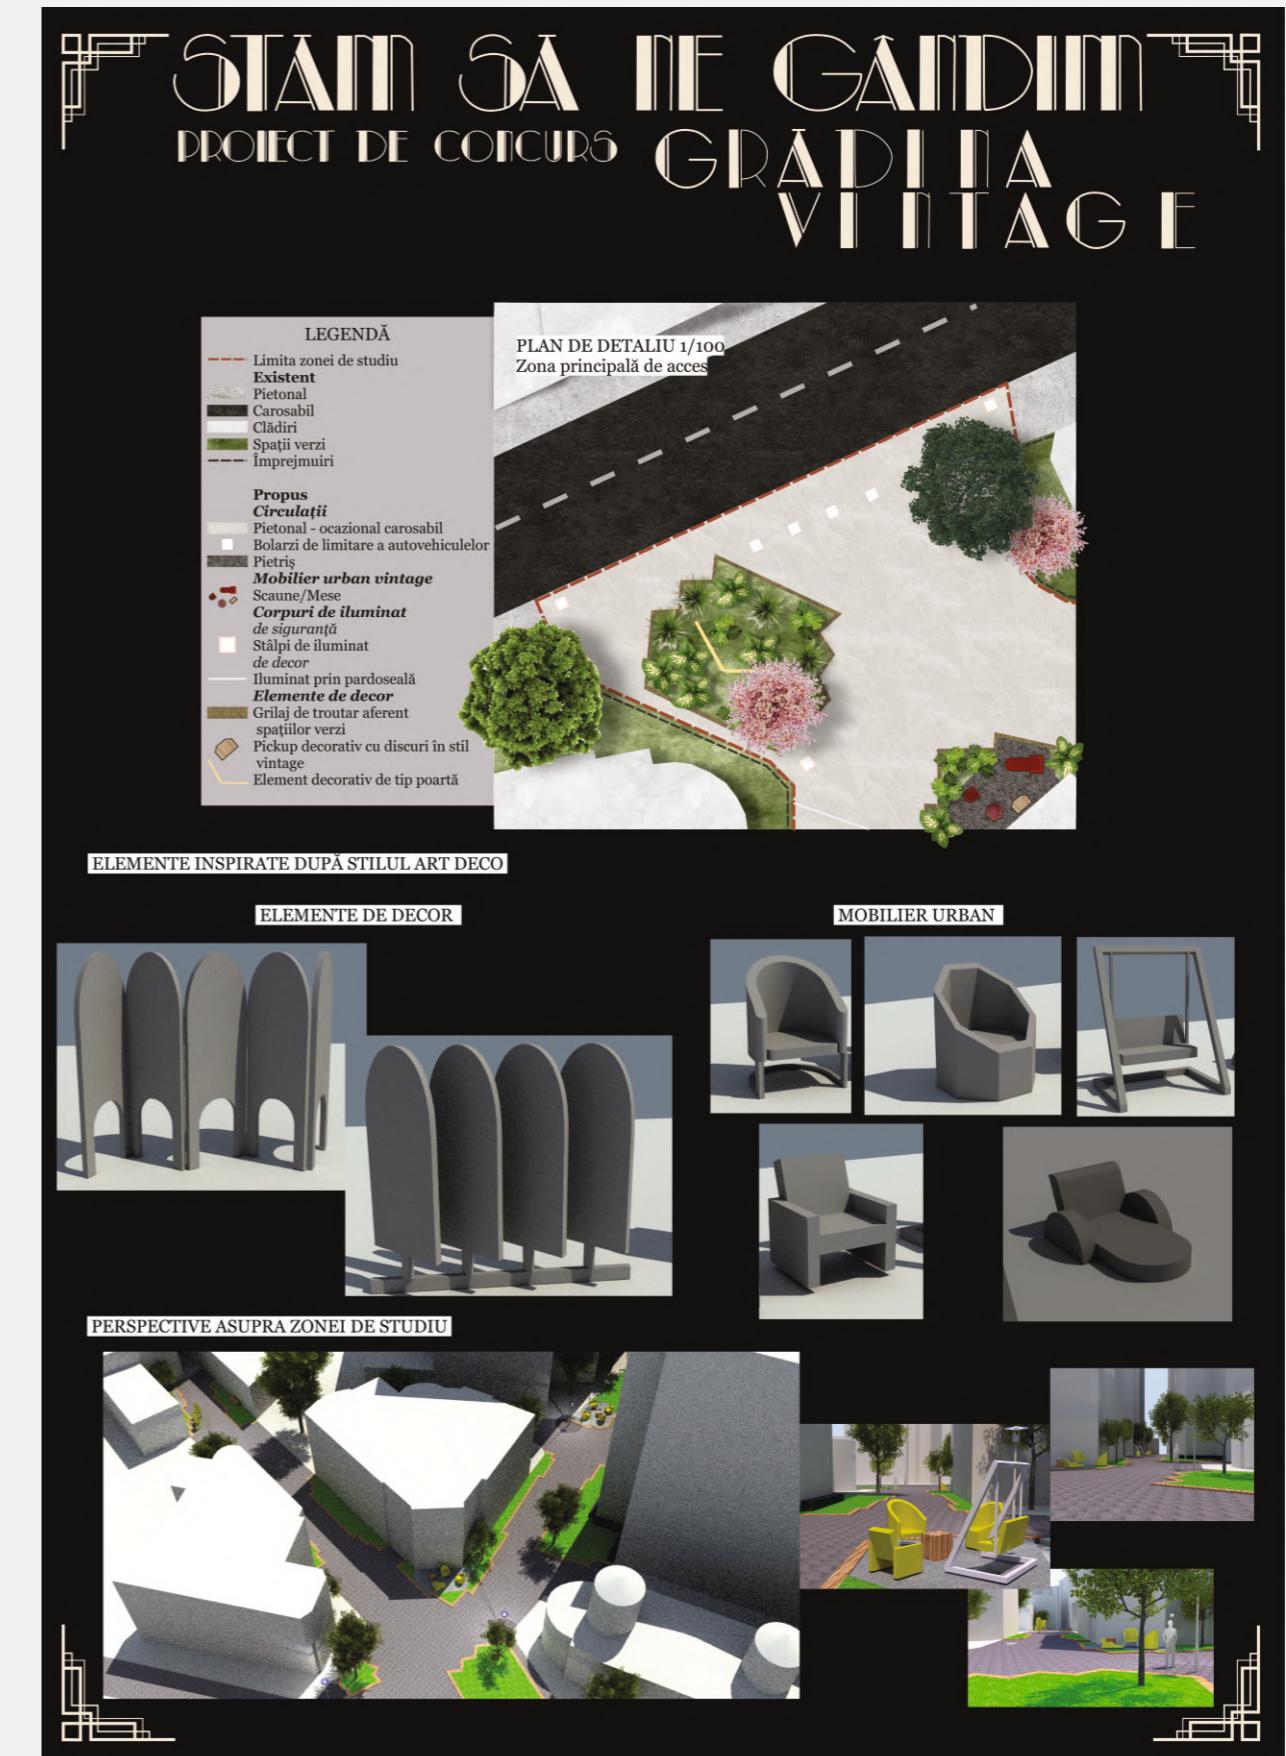

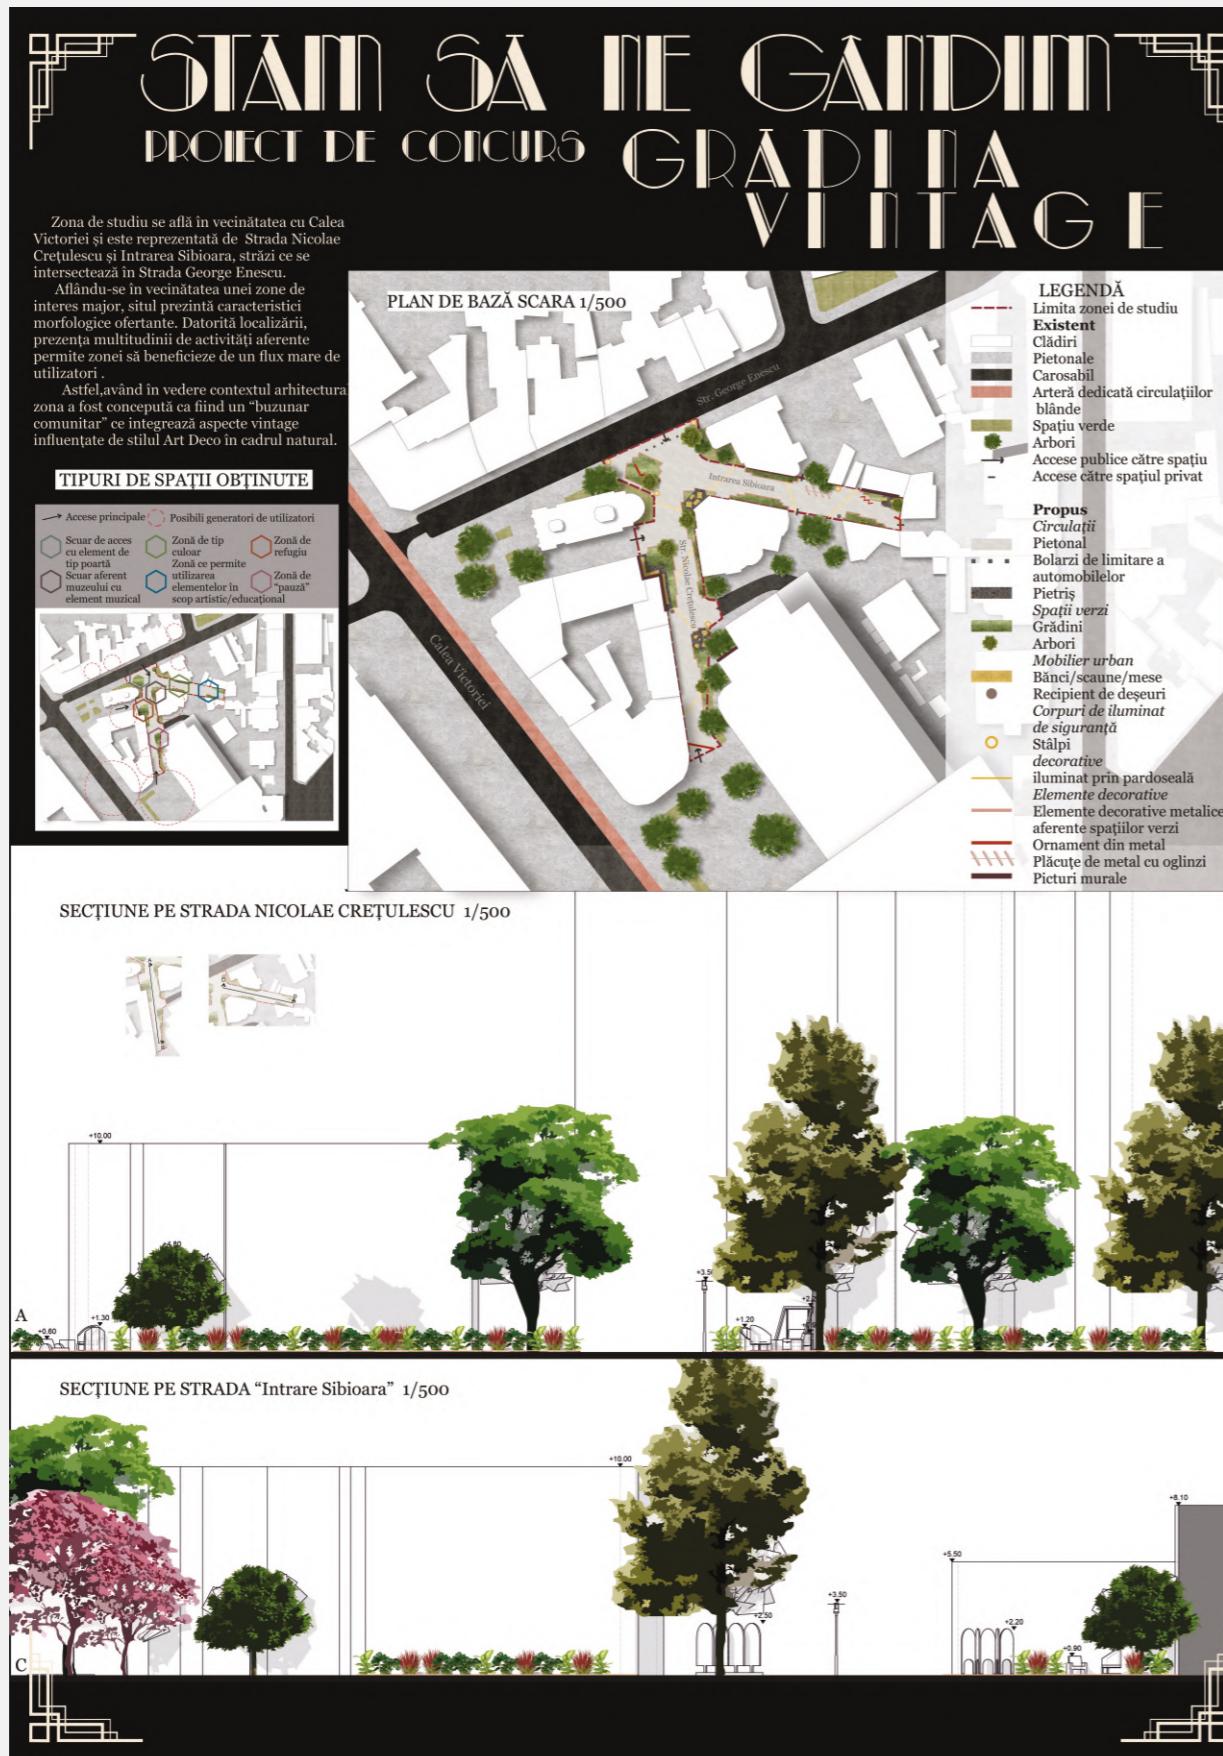

This subject of this project was the development of a design for some spaces in a residential neighborhood that aimed to spatially distance people in a creative way to allow them to connect with the natural environment outer spaces in pandemic conditions.

Intervention projects in the territory: at county and local level

The proposed improvements were aimed at revitalizing and modernizing the quality of the spaces. Through these projects, I had the advantage of learning to develop a management program for the proposed projects and to familiarize myself with working in a team with people from different fields.

A fictional mobile app for sushi lovers

NoriDate

A digital sushi finder for lovesick teens who need a perfect date for specific tastes. It uses the phone's GPS to track the nearest places that have sushi for the lovers to choose from.

It's the love for sushi that will bring you closer.

A phone application that can find specific locations where you can buy or order sushi from. The application can find restaurants or markets with specific Asian products in the vicinity of the selected area on the map. By selecting the desired location, the application displays the menu and the Asian products available in that place for those who want to order or prepare their sushi at home.
